WEEKLY CHECK-IN

HANS PUJALTE (PUJA0009)

COMP3742, TONSLEY
COMPLETED: 26/10/2026

Hans Pujalte

Question 1 Progress: What did you accomplish this past week? Any issues slowing down progress?

- Completed lab 9 (submitted several days late, sorry)
- Artefact 2 progress

Question 2 Plans: What are your goals for the next week? How does this match against your overall project plan?

- Finish Artefact 2 by the weekend/early Monday
- Group meeting to go over final submission of Artefact 2

Question 3 Study: List and discuss the three main points of the material covered this week.

- Revision into Data Structures and Algorithms, and how they are used to find the optimal solution to AI problems
- Learnt how CFGs can be represented and used in Prolog to generate and parse natural language phrases/sentences
- Learnt how heuristics are used AI, specifically how they play a role in gradient descent/greedy search

Question 4 Insights: What was the single most confusing concept ('muddiest point) for you in this week's material, and what specific question do you have about it? –

- Understanding how Stochastic Gradient Descent actually works was quite confusing initially. I understood the high-level idea behind this concept but never went into depth on how it is actually achieved
- Utilised AI and youtube videos to learn this concept

Question 5 Linkage:How could one key idea from this week's material be directly applied to your project?

- Applying rule-based reasoning to electricity-network stress can be applied to Artefact 2
