WEEKLY CHECK-IN

HANS PUJALTE (PUJA0009)

COMP3742, TONSLEY
COMPLETED: 19/10/2026

Hans Pujalte

Question 1 Progress: What did you accomplish this past week? Any issues slowing down progress?

- Caught up with Lab 7, submitted a week late (just wanted to do it anyway)
- This lab was quite long
- Revision on Cross Validation, MLPs and the importance of Activation Functions

Question 2 Plans: What are your goals for the next week? How does this match against your overall project plan?

- Organised a meeting this Tuesday (20/10) to discuss Artefact 2 with my group members
- Divide up group contributions and start working on A2
- Complete lab 9

Question 3 Study: List and discuss the three main points of the material covered this week.

- CV repeatedly partitions the dataset into different subsets, training and testing the model multiple times to get a stable, reliable estimate of its true performance
- MLPs need an activation function to introduce non-linearity in a neural network. Without it, the model can not learn any relationships from patterns since a pure linear network collapses into a single linear equation.
- Revision on how to create a MLP using Pytorch. Mainly syntax

Question 4 Insights: What was the single most confusing concept ('muddiest point) for you in this week's material, and what specific question do you have about it? –

- Nothing too confusing on any of the material, mainly revision
- Struggled initially with Question 5 of the lab since I haven't touched PyTorch in awhile but references to previous work was helpful
- No questions here

Question 5 Linkage:How could one key idea from this week's material be directly applied to your project?

- Hyperparameter tuning and increase of neurons/hidden layers may result in diminishing returns in terms of predictive performance.
