

COMP3742 Artificial Intelligence

Artefact 1 Assessment Rubric

	High Distinction	Distinction	Credit	Pass	Fail
Technical Report (35%)					
Individual Component	Excellent and comprehensive report. The data ingestion pipeline architecture and proposed hybrid system architecture is very well-considered and designed. Detailed evaluation is presented along with critical insights into the dataset analysis, stakeholder requirements, and ethical implications. Limitations and future work is clearly articulated.	Strong, well-structured report. The data ingestion pipeline and proposed hybrid architecture is explained in detail. Detailed evaluation is performed with a survey of hybrid models performed. The analysis clearly demonstrates a strong understanding of the dataset and human factors.	A well-written report covering all required sections. The architecture is logical. Evaluation of hybrid models is sufficient and correct. The analysis provides good examples of the data processing steps and insights into the dataset.	A satisfactory report that addresses most requirements. The architecture is described but there is insufficient justification. Model survey and dataset analysis are present but might be incomplete, minimal or contain minor errors. Analysis demonstrates the system functionality but not does not demonstrate the value of the hybrid system.	Incomplete or poorly written report. Major components such as the proposal, dataset analysis or architecture are missing or contain substantive errors. The data pipeline's operation and value are poorly or not explained.
Technical Implementation (30%)					
Individual Component	Sophisticated, robust architecture that is well-justified. Code is of excellent standard, without or with minimal error/issues, highly automated, and meets professional requirements.	Well-designed, justified, and robust data ingestion architecture. Code is fully functional, automated, and follows best practices.	Logical data ingestion architecture that meets the core requirements. Code is functional but might lack full automation and needs additional revision.	Architecture meets minimum requirements. Code functions but might require manual steps or is poorly structured or has other quality or professional standard issues.	Architecture is insufficient, incorrect, or incomplete. Code is non-functional or incomplete.

COMP3742 Artificial Intelligence

Artefact 1 Assessment Rubric

	High Distinction	Distinction	Credit	Pass	Fail
Video Demonstration (5%)					
Individual Component	Highly professional and clear demonstration of a working pipeline within time limits. Excellent technical quality and very well presented with detailed insights.	Clear and well-presented demonstration. Good structure and good technical quality. Adheres to time limit and meets requirements.	Demonstrates core functionality but presentation might lack clarity. Acceptable technical quality.	Demonstration is difficult to follow or doesn't clearly show functionality. Poor technical quality.	Missing, incomplete, or unclear. Does not show a working system.
Professional Standards (5%)					
Individual Component	Exemplary standard of academic writing. Perfect adherence to all submission, formatting, citation, and AI policy guidelines.	Professional writing. Minor errors in formatting, submission, or citation.	Satisfactory standard of writing that is understandable but with several errors in formatting or submission guidelines.	The report is difficult to read or understand. Significant deviations from submission and formatting guidelines.	Does not meet required professional standards. Ignores submission instructions and/or academic standards.

COMP3742 Artificial Intelligence

Artefact 1 Assessment Rubric

	High Distinction	Distinction	Credit	Pass	Fail
Project Management and Workflow (10%)					
Team Component	Excellent project management. Extremely well-structured directory, robust handling of technical trade-offs between stakeholder requirements, and clear evidence of proactive task planning.	Strong project management. Well-organised submission structure, logical technical decisions, and clear evidence of good planning and workflow.	Satisfactory project management. Meets basic structural requirements with adequate planning.	Minimal project management. Disorganised file structure, poor justification of technical choices, or lack of logical workflow.	No evidence of project management. Fails to follow directory requirements and lacks structural organisation.
Team Collaboration and Integration (15%)					
Team Component	Excellent Integration Statement. Deep analysis of individual role and seamless alignment of module with overarching governance and system architecture.	Clear and comprehensive Integration Statement. Strong alignment between the individual module, team objectives, and system architecture.	Adequate Integration Statement. Outlines the individual role and team objective, but lacks deep analysis of how the module integrates with overarching governance.	Basic integration statement. Mentions the team context but provides vague or insufficient explanation of module integration and system architecture.	Missing or inadequate integration statement. No evidence of team alignment or understanding of the broader system architecture.
