COMP3742 Artificial Intelligence

Artefact 2 Assessment Rubric

	High Distinction	Distinction	Credit	Pass	Fail
Technical Report (20%)					
Individual Component	Outstanding and comprehensive report addressing data modelling, architecture pipeline, and evaluation. The hybrid system architecture is very welldesigned and justified. Evaluation is thorough, providing deep, critical insights into the ML model performance and the value added by the symbolic layer, and risk mitigation. Limitations and future work is clearly articulated.	Strong, well-structured report. The hybrid architecture is clearly explained and well-justified. Evaluation is detailed, effectively comparing models. The analysis clearly demonstrates the value of the symbolic layer with good examples of its benefits and risk mitigation.	Well-written report covering all required sections. The architecture is logical. Evaluation of ML models is sufficient and correct. The analysis provides good examples of the system and insights into the value of the symbolic layer.	Satisfactory report that addresses most requirements. The architecture is described but there is insufficient justification. ML evaluation is present but might be minimal or contain minor errors. Analysis demonstrates the system functions but not necessarily the value of the hybrid system.	Incomplete or poorly written report. Major components are missing or contain substantive errors. The system's operation and value are not explained.
Technical Implementation (20%)					

COMP3742 Artificial Intelligence

Artefact 2 Assessment Rubric

Individual Component	Sophisticated, robust architecture that is welljustified. Code is of excellent standard, without or with minimal error/issues, highly automated via a pipeline, and meets professional requirements (e.g. Google Python Style Guide).	Well-designed, justified, and robust architecture. Code is fully functional, automated, and follows best practices for both languages (Python and Prolog)	Logical architecture that meets the core requirements. Code is functional but might lack full automation and needs additional revision.	Architecture meets minimum requirements. Code functions but might require manual steps or is poorly structured or has other quality or professional standard issues.	Architecture is insufficient, incorrect, or incomplete. Code if nonfunctional or incomplete.

Student Name: **Overall Mark:** **Grade:**

Important Notice: Assessment submissions that do not adhere to the required AI declaration requirements may incur an academic penalty of up to 50% of total marks.

	High Distinction	Distinction	Credit	Pass	Fail
Video Demonstration (5%)					

COMP3742 Artificial Intelligence

Artefact 2 Assessment Rubric

Individual Component	Highly professional and clear demonstration of a working pipeline within the time limit. Excellent technical quality and very well presented with detailed insights on system architecture, model performance, and meeting stakeholder requirements.	Clear and wellpresented demonstration. Good structure and good technical quality. Adheres to the time limit and meets requirements.	Demonstrates core functionality but presentation might lack clarity. Acceptable technical quality.	Demonstration is difficult to follow or doesn't clearly show functionality. Poor technical quality.	Missing, incomplete, or unclear. Does not show a working system.
Professional Standards (5%)					
Individual Component	Exemplary standard of academic writing. Perfect adherence to all submission, formatting, IEEE citation, and AI policy guidelines. Self-Assessment included.	Professional writing. Minor errors in formatting, submission, selfassessment, or citation.	Satisfactory standard of writing that is understandable but with several errors in formatting or submission guidelines.	The report is difficult to read or understand. Significant deviations from submission and formatting guidelines.	Does not meet required professional standards. Ignores submission instructions and/or academic standards.

COMP3742 Artificial Intelligence

Artefact 2 Assessment Rubric

Project Management and Workflow (20%)			.		.
Team Component	Excellent project management. Extremely wellstructured directory, robust handling of technical trade-offs, complete README and requirements.txt files, and clear evidence of proactive task planning.	Strong project management. Well-organised submission structure, logical technical decisions, and clear evidence of good planning and workflow. Includes required system files.	Satisfactory project management. Meets basic structural requirements with adequate planning.	Minimal project management. Disorganised file structure, poor justification of technical choices, or lack of logical workflow.	No evidence of project management. Fails to follow directory requirements and lacks structural organisation.
Team Collaboration and Integration (30%)					
Team Component	Excellent Integration Statement (within word limits). Deep analysis of individual role and seamless alignment of the individual module with overarching governance and system architecture.	Clear and comprehensive Integration Statement. Strong alignment between the individual module, team objectives, and system architecture.	Adequate Integration Statement. Outlines the individual role and team objective, but lacks deep analysis of how the module integrates with overarching governance.	Basic integration statement. Mentions the team context but provides vague or insufficient explanation of module integration and system architecture.	Missing or inadequate integration statement. No evidence of team alignment or understanding of the broader system architecture.
